

SoDam-Agent — Beginner Guide (English)

[한국어 가이드](#) · [README \(reference\)](#)

*This guide is written so that **someone installing an AI / program for the very first time** can just follow along.*

0. First — what is this? (1 min)

- **Claude Code**: a program that lets you give tasks to an AI. Normally you talk to **one AI**.
- **SoDam-Agent**: a tool that adds **several AI teammates (a team)** to Claude Code at once, and lets you **create and train your own agents even after installing**.
- What you'll do: type **a few commands** into Claude Code. That's it.

💡 One-line glossary

- **Plugin**: a part you snap into a program.
- **Marketplace**: a store that collects parts.
- **Agent (subagent)**: one AI teammate.
- **Input box**: the field at the bottom of Claude Code where you type.

1. Get ready (just two things)

1. **Claude Code must be installed.** (If not: search "Claude Code" → claude.com/claude-code)
2. **An internet connection.**

2. Install (follow along exactly)

*Type the text below into the **Claude Code "input box"**, not a black terminal.*

Step 1 · Open Claude Code

- Open it the way you normally do.

Step 2 · Register the store (marketplace) — once only

👉 Type this **exactly** and press Enter:

```
/plugin marketplace add sodam-ai/SoDam-Agent
```

📺 Success when you see a "marketplace added" message.

Step 3 · Install a team

👉 Type your chosen team and Enter (one is fine):

```
/plugin install web-app-team@sodamagent-marketplace
```

- Docs team: `/plugin install docs-team@sodamagent-marketplace`
- Research team: `/plugin install research-team@sodamagent-marketplace`
- Marketing team: `/plugin install marketing-team@sodamagent-marketplace`
- Data team: `/plugin install data-team@sodamagent-marketplace`

Step 4 · (Optional) Install the management tool

To **create and train your own agents**, also install:

```
/plugin install sodam-agent@sodamagent-marketplace
```

Step 5 · ★ Restart — the most important step!

👉 Type `/exit` to quit, then open `claude` again.

***Why?** Plugins are **loaded once when Claude Code starts**. Before a restart, agents **won't appear**.*

3. Verify it worked

👉 Type and Enter:

```
/agents
```

💻 A list of AI teammates appears. Find a name like `web-app-team:reviewer` .

- If you see it, **success**.
-

4. Give a teammate a task (example)

The easiest way is **plain language**. In the input box:

```
Ask web-app-team:reviewer to review this code
```

Or for a writing team:

```
Ask docs-team:editor to make this text smoother
```

5. Create & train your own agents (sodam-agent tool)

If you installed `sodam-agent` in Step 4 and restarted, type `/sodam-agent:` to see these commands.

+ Create a new agent

```
/sodam-agent:new-agent
```

🎓 Train an agent

```
/sodam-agent:training-agent
```

📄 Copy a team agent into yours

```
/sodam-agent:pick-agent
```

💾 Save · 🗑️ Delete an agent

```
/sodam-agent:save-agent  
/sodam-agent:remove-agent
```

6. When you no longer need it (remove)

👉 Type and Enter:

```
/plugin
```

🖨 Your installed plugins are listed. Select the team/tool and choose **uninstall**.

7. When you get stuck (common cases)

If this happens	Why?	Do this
Installed but /agents shows nobody	You didn't restart	Quit and reopen Claude Code
/sodam-agent shows unrelated stuff	sodam-agent not installed	/plugin install sodam-agent@sodamagent-marketplace → restart
marketplace add says "not found"	GitHub propagation delay	Retry in 1–2 min
/plugin does nothing	Old Claude Code	Update Claude Code
The doc-search tool errors	No Node.js	Install LTS from nodejs.org

8. Safety & cost (must know)

- **Safe to remove.** Install/uninstall is managed by Claude Code.
- **Passwords/keys are not stored in files.**
- This tool is provided **"AS IS" with no warranty.**
- For any external tool you install, **check its pricing/terms yourself.**

9. License (short)

- **Apache License 2.0** — commercial use, modification, copying, and redistribution allowed.
- "Claude Code/Anthropic" etc. are their companies' trademarks; **SoDam-Agent is unofficial and not affiliated.**

10. (Advanced) Instead of the marketplace — run it from your folder

1. Download this project (ZIP from GitHub → unzip).
2. In the Claude Code **input box**:

```
/plugin marketplace add C:\downloaded-folder\SoDam-Agent
```

3. Then install:

```
/plugin install web-app-team@sodamagent-marketplace  
/plugin install sodam-agent@sodamagent-marketplace
```

4. **Restart** to apply.

11. Frequently asked questions (FAQ)

Question	Answer
Is SoDam-Agent free?	SoDam-Agent is free (Apache-2.0). Claude Code subscription and connected tools have their own pricing.
Which Claude plan do I need?	Pro or higher is recommended.
Can I use it offline?	Install needs internet. After that, agents work with a Claude API connection.
Is my data sent anywhere?	No. SoDam-Agent has no server.
Can I make my own team?	Yes. Use the 5 sodam-agent commands for your own agents.
