

AgentRoster — Beginner Guide (English)

[한국어 가이드](#) · [README \(reference\)](#)

This guide is written so that **someone installing an AI / program for the very first time** can just follow along. Jargon is kept to a minimum, and any term is explained **in one line, right there**.

0. First — what is this? (1 min)

- **Claude Code**: a program that lets you give tasks to an AI. Normally you talk to **one AI**.
- **AgentRoster**: a tool that adds **several AI teammates (a team)** to Claude Code at once. e.g., it "hires" a *planner* · *frontend developer* · *backend developer* · *reviewer* all together.
- What you'll do: type **two commands** into Claude Code. That's it.

💡 **One-line glossary** - **Plugin**: a *part you snap into* a program. (AgentRoster is that part.)
- **Marketplace**: a *store that collects parts*. Register it, then you can grab parts. - **Agent (subagent)**: one AI teammate. - **Input box**: the field at the bottom of Claude Code where you type.

1. Get ready (just two things)

1. **Claude Code must be installed.** (If not, install it first: search "Claude Code" → official site claude.com/claude-code)
2. **An internet connection.**

(Optional) To also use the *doc-search tool* of `web-app-team` · `research-team`, you need **Node.js**. Without it the teammates still work; only that tool is missing. If needed, get the "LTS" build from nodejs.org.

2. Install (follow along exactly)

Type the text below into the **Claude Code** “input box”, not a black terminal.

Step 1 · Open Claude Code

- Open it the way you normally do. (When you see the input box, you're ready.)

Step 2 · Register the store (marketplace) — once only

👉 Type this **exactly** in the input box and press Enter:

```
/plugin marketplace add sodam-ai/AgentRoster
```

💻 Success when you see a “marketplace added” message. > ⚠️ If it *fails* or says *not found*: it may not be published yet. In that case see “**Advanced: run from a download**” at the bottom.

Step 3 · Install a team

👉 Type your chosen team and Enter (one is fine):

```
/plugin install web-app-team@agentroster
```

- Docs team: `/plugin install docs-team@agentroster`
- Research team: `/plugin install research-team@agentroster`

💻 Done when you see an “installed” message!

3. Verify it worked

👉 Type and Enter:

```
/agents
```

 A list of AI teammates appears. Find a name like `web-app-team:reviewer`. - The name starts with `team:` → *your installed teammates are clearly distinguishable*. (This is the key point!) - If you see it, **success**. (Press **Esc** to exit the list.)

4. Give a teammate a task (example)

The easiest way is **plain language**. In the input box:

```
Ask web-app-team:reviewer to review this code
```

Or for a writing team:

```
Ask docs-team:editor to make this text smoother
```

 Claude calls that teammate (subagent), hands off the task, and brings back the result.

 Type `@` in the input box to **pick** a teammate from a list.

5. When you no longer need it (remove)

 Type and Enter:

```
/plugin
```

 Your installed plugins are listed. Select the team and choose **uninstall**. > Removal is handled safely by Claude Code — if you remove it by mistake, just install it again.

6. When you get stuck (common cases)

If this happens	Why?	Do this
<code>/plugin</code> does nothing	Old Claude Code	Update Claude Code to the latest
<code>marketplace add</code> won't work	Not published yet, or typo	Retry after it's published / use "Advanced" below
Installed but nothing in <code>/agents</code>	Not loaded yet	Type <code>/reload-plugins</code> → still missing? Restart Claude Code
The doc-search tool errors	No Node.js / blocked internet	Install LTS from nodejs.org / try another network
Install fails on work network	Firewall / proxy	Try another network (e.g., home)
Want to use it on a phone	—	This tool is for Claude Code on a computer (no standalone phone use)

7. Safety & cost (must know)

- **Safe to remove.** Install/uninstall is managed by Claude Code.
- **Passwords/keys are not stored in files.** (Tool config holds only the key *name*.)
- This tool is provided **"AS IS" with no warranty**. You are responsible for its use.
- For any external tool (e.g., context7 doc search) or service you install, **check its pricing/terms yourself**. (Most have a free tier, but policies can change.)

8. License (short)

- **Apache License 2.0** — commercial use, modification, copying, and redistribution allowed (keep copyright notices, state changes, preserve NOTICE). See `LICENSE` · `NOTICE` .

- "Claude Code/Anthropic/Context7" etc. are their companies' names (trademarks);
AgentRoster is unofficial and not affiliated.
-

9. (Advanced) Run from a download — when the marketplace isn't ready

1. Download this project (ZIP from GitHub → unzip).
2. In a terminal, launch it pointing at a team folder:

```
claude --plugin-dir "downloaded-folder\plugins\web-app-team"
```

3. The rest is the same as **Steps 3·4 (verify·use)** above.
-
