

SoDam-Agent

[한국어](#) | [English](#) · [Beginner Guide \(GUIDE\)](#)

A **beginner-friendly** tool that adds **role-based AI teammate teams** (planner, developer, reviewer, ...) to Claude Code with **a single plugin install** — and lets you **create, train, and manage your own agents even after installing**. No hand-editing config files — **a few commands** inside Claude Code and you're set. This is an **installer tool** for teams. It does **not** run the agents for you.

Naming note

- **Product / repository name** = `SoDam-Agent` (marketplace address: `sodam-ai/SoDam-Agent`)
- The `@sodamagent-marketplace` **in install commands** = **the marketplace's internal id**. Just type it as-is.

1. What is SoDam-Agent? (in plain words)

Claude Code lets you give tasks to an AI — usually you talk to **one AI**. **SoDam-Agent** adds **several AI teammates (subagents)** as a **"team set"** to Claude Code at once. And **even after installing**, you can **create new agents yourself** and **train them** to behave the way you want.

- Analogy: it "hires" *role-based teammates* — **planner · frontend-dev · backend-dev · reviewer** — for your previously solo AI, and lets you *hire and train more* as needed.
- You **never** create files or edit config by hand.

In one line: "A tool that installs AI teammate teams into Claude Code, and lets you create and train your own."

2. Prerequisites & required programs

Item	Required?	Notes
Claude Code	✅ Required	Teammates are used inside Claude Code.
Internet	✅ Required	To fetch the plugin and download some tools (MCP).
Node.js 18+	🟡 Optional (recommended)	The doc-search tool (context7 MCP) runs via <code>npx</code> . Without Node, teammates still work; only that tool is unavailable .

3. Download & install

★ Method A — Install from the marketplace (recommended, easiest)

1. Open Claude Code.
2. Add the marketplace (one time only):

```
/plugin marketplace add sodam-ai/SoDam-Agent
```

3. Install the team you want:

```
/plugin install web-app-team@sodamagent-marketplace
```

- Other teams: `docs-team` · `research-team` · `marketing-team` · `data-team`

4. (Optional) Install the agent-management tool:

```
/plugin install sodam-agent@sodamagent-marketplace
```

5. Restart Claude Code (quit and reopen).
 - ⚠️ **The most common gotcha:** plugins load once on startup. **Restart and they show up.**

Method B — Run it from your own folder

1. Get this repository (ZIP from GitHub and unzip).
2. In the Claude Code input box:

```
/plugin marketplace add C:\downloaded-folder\SoDam-Agent
```

3. Install teams/tool, then restart.

4. Quick start (3 steps)

1. `/plugin marketplace add sodam-ai/SoDam-Agent` (once).
2. `/plugin install web-app-team@sodamagent-marketplace` → **restart**.
3. Open `/agents` — if you see `web-app-team:reviewer`, you're done.

Expected time: **about 2–3 minutes**.

5. What you can install (5 teams + management tool)

① Team plugins (bundles of AI teammates)

Team (install name)	Name	AI teammates (roles)	Bundled tool (MCP)
web-app-team	Web App Build Team	planner · frontend-dev · backend-dev · reviewer	context7 (library-docs search)
docs-team	Docs / Content Team	writer · editor · fact-checker	none
research-team	Research Team	researcher · analyst · critic	context7
marketing-team	Marketing Team	copywriter (copy & content) · seo-analyst (SEO) · social-manager (social media)	none
data-team	Data Team	data-engineer (collect & clean) · data-analyst (analysis) · data-viz (visualization)	none

Each teammate gets **least-privilege tools**. Model is `inherit` (follows your default model).

② **Management tool plugin** (`sodam-agent`) — command set to create and train your own agents.

6. How to use it

After installing, teammates are registered as `team:role` (e.g., `web-app-team:reviewer`).

- **Verify:** type `/agents` → check that `web-app-team:reviewer` etc. appear.
- **How to call one:**
 1. Natural language: Ask `web-app-team:reviewer` to review this code
 2. Explicit (@-mention): type `@` in the input → pick from the list.
 3. Automatic: Claude may delegate to the right teammate based on the task.

7. Manage your own agents after install (sodam-agent)

With `sodam-agent` installed, you can create and manage agents **inside Claude Code with slash commands** — no terminal.

Command	What it does
<code>/sodam-agent:new-agent</code>	Create a new agent
<code>/sodam-agent:training-agent</code>	Train an agent
<code>/sodam-agent:save-agent</code>	Save / reuse an agent
<code>/sodam-agent:pick-agent</code>	Copy a team agent to yours
<code>/sodam-agent:remove-agent</code>	Delete an agent

What is "training"?

- **Training is NOT re-training the AI.** It edits the agent's **instructions (system prompt)** to change behavior.

- **Team agents** can't be edited directly (overwritten on updates). Use `pick-agent` to make a copy, then train the copy.

8. Command reference

Command	What it does
<code>/plugin marketplace add sodam-ai/SoDam-Agent</code>	Register the marketplace (first time)
<code>/plugin install web-app-team@sodamagent-marketplace</code>	Install the web app team
<code>/plugin install sodam-agent@sodamagent-marketplace</code>	Install the agent-management tool
<code>/agents</code>	View/manage installed AI teammates
<code>/sodam-agent:new-agent</code>	Create a new agent
<code>/sodam-agent:training-agent</code>	Train an agent
<code>/sodam-agent:pick-agent</code>	Copy a team agent into yours
<code>/sodam-agent:remove-agent</code>	Delete an agent (backup + confirm)

9. Workflow at a glance

Add marketplace (once) → Install teams/tool (`/plugin install`) → Restart
 → Verify with `/agents` (team:role)
 → Call a teammate (natural language / @)
 → (optional) `/sodam-agent:new-agent` to create → `training-agent` to teach

10. File & document locations

- **Installed plugin cache:** `~/.claude/plugins/cache/`
- **Agents you create:** `<project>/~/.claude/agents/<name>.md` (global: `~/.claude/agents/`)
- **This repository's structure:**
 - `.claude-plugin/marketplace.json` — marketplace catalog (6 teams, all registered)
 - `plugins/<team>/~/.claude-plugin/plugin.json` — team metadata
 - `plugins/<team>/agents/<role>.md` — one AI teammate
 - `plugins/sodam-agent/commands/*.md` — the 5 agent-management commands
- **Docs:** `README.md` (KO) · `README.en.md` (EN) · `GUIDE.md` (KO beginner) · `GUIDE.en.md` (EN) · `docs/*.pdf` · `LICENSE` · `NOTICE`

11. Troubleshooting (symptom → cause → fix)

Symptom	Cause	Fix
Installed but <code>/agents</code> shows nothing	No restart	Quit and reopen Claude Code

/sodam-agent shows unrelated stuff	sodam-agent not installed	/plugin install sodam-agent@sodamagent-marketplace → restart
marketplace add says not found	GitHub cache delay	Retry after 1–2 minutes
No /plugin command	Old Claude Code	Update Claude Code
context7 errors	No Node.js	Install LTS from nodejs.org
Marketplace added but 0 teammates	Didn't run install	Run /plugin install <team>@sodamagent-marketplace separately

12. Safety & disclaimer

- **Removal is safe:** handled by Claude Code's /plugin manager.
- **Secrets are never stored in files:** only the key *name* is used; actual values stay in OS env vars.
- This software is provided **"AS IS" with no warranty.**

13. License · Copyright · Commercial use (important)

- **License: Apache License 2.0.** Commercial use, modification, copying, and redistribution are **allowed**.
- **Copyright:** © 2026 SoDam AI Studio.
- **Trademarks:** "Claude Code", "Claude", "Anthropic" are trademarks of Anthropic. **SoDam-Agent is unofficial and not affiliated with any of them.**

14. Security & data flow

- **SoDam-Agent has no server.** It downloads files from GitHub and registers them with Claude Code.
- **No user data is collected or transmitted.**
- API keys, passwords, and tokens are **never stored in files.**

15. Architecture

```
sodam-ai/SoDam-Agent (GitHub)
|
├── .claude-plugin/marketplace.json  ← marketplace catalog
|
├── plugins/
|   ├── web-app-team/ (plugin.json + agents/ + .mcp.json)
|   ├── docs-team/    (same structure)
|   ├── research-team/ (same structure)
|   ├── marketing-team/ (same structure)
|   ├── data-team/    (same structure)
|   └── sodam-agent/commands/ (new · training · save · pick · remove)
|
└── src/ + bin/cli.mjs  ← Codex CLI only
```

Using it in Codex too (role translation · beta)

Besides Claude Code, you can use the same team in **Codex**. Note: Codex has no "parallel team" concept — it **translates each role into Codex's format** (instructions file + skills) (beta).

How to install (terminal required):

```
node bin/cli.mjs install web-app-team --target codex --dir "C:\my\project\folder"
```

16. FAQ (frequently asked questions)

Q. Is this tool free to use?

*SoDam-Agent itself is **free** (Apache-2.0 open source). Claude Code subscription fees follow Anthropic's pricing.*

Q. Can I use it offline?

Initial install requires internet. After that, agents work with a Claude API connection.

Q. Is my data sent to a SoDam-Agent server?

No. SoDam-Agent has no separate server.

Q. Is it Windows-only?

Windows-first, but macOS/Linux work with `/plugin` commands too.
