

SoDam-Agent — Beginner Guide (English)

*This guide is written so that **someone installing an AI / program for the very first time** can just follow along. Jargon is kept to a minimum, and any term is explained **in one line, right there**.*

0. First — what is this? (1 min)

- **Claude Code**: a program that lets you give tasks to an AI. Normally you talk to **one AI**.
- **SoDam-Agent**: a tool that adds **several AI teammates (a team)** to Claude Code at once, and lets you **create and train your own agents even after installing**.
- What you'll do: type **a few commands** into Claude Code. That's it.

💡 One-line glossary

- **Plugin**: a part you snap into a program. (SoDam-Agent is that part.)
 - **Marketplace**: a store that collects parts.
 - **Agent (subagent)**: one AI teammate.
 - **Input box**: the field at the bottom of Claude Code where you type.
-

1. Get ready (just two things)

1. **Claude Code must be installed**. (Search "Claude Code" → official site claude.com/claude-code)
2. **An internet connection**.

*(Optional) To use the doc-search tool of `web-app-team` · `research-team`, you need **Node.js**. Without it, teammates still work. Get the "LTS" build from nodejs.org.*

2. Install (follow along exactly)

Type the text below into the **Claude Code "input box"**, not a black terminal.

Step 1 · Open Claude Code

Open it the way you normally do.

Step 2 · Register the store (marketplace) — once only

👉 Type this **exactly** in the input box and press Enter:

```
/plugin marketplace add sodam-ai/SoDam-Agent
```

💻 Success when you see a "marketplace added" message.

Step 3 · Install a team

👉 Type your chosen team and Enter:

```
/plugin install web-app-team@sodamagent-marketplace
```

- Docs team: `/plugin install docs-team@sodamagent-marketplace`
- Research team: `/plugin install research-team@sodamagent-marketplace`

Step 4 · (Optional) Install the management tool

```
/plugin install sodam-agent@sodamagent-marketplace
```

Step 5 · ★ Restart — the most important step!

👉 Type `/exit` to quit, then open `claude` again.

Why? Plugins are **loaded once when Claude Code starts**. Before a restart, the agents won't appear.

3. Verify it worked

👉 Type and Enter:

```
/agents
```

💻 A list of AI teammates appears. Find `web-app-team:reviewer`.

- The `team:` prefix makes your installed teammates clearly distinguishable.
 - If you see it, **success**. (Press **Esc** to exit the list.)
-

4. Give a teammate a task (example)

The easiest way is **plain language**:

```
Ask web-app-team:reviewer to review this code
```

Or:

```
Ask docs-team:editor to make this text smoother
```

💻 Claude calls that teammate, hands off the task, and brings back the result.

💡 Type `@` in the input box to pick a teammate from a list.

5. Create & train your own agents (sodam-agent tool)

If you installed `sodam-agent` in Step 4 and restarted, type `/sodam-agent:` to see these commands.

+ Create a new agent

```
/sodam-agent:new-agent
```

💻 It asks for name · job · personality. Answer, and **your agent** is created.

🎓 Train an agent

```
/sodam-agent:training-agent
```

💻 It edits the agent's **instructions** to change behavior.

What is "training"? Not re-training the AI — it *changes the instructions* you give the agent.

Copy a team agent into yours

```
/sodam-agent:pick-agent
```

Team agents **can't be edited directly** (edits vanish on update). Copy first, then train the copy.

Save · Delete an agent

```
/sodam-agent:save-agent    ← save your agent so every project can use it
/sodam-agent:remove-agent  ← delete an agent (backs up first, then asks "delete for sure?")
```

6. When you no longer need it (remove)

 Type and Enter:

```
/plugin
```

 Your installed plugins are listed. Select the team/tool and choose **uninstall**.

7. When you get stuck (common cases)

If this happens	Why?	Do this
Installed but nobody shows in /agents	You didn't restart	Quit and reopen Claude Code. Still missing? /reload-plugins
/sodam-agent shows unrelated stuff	Not installed or no restart	/plugin install sodam-agent@sodamagent-marketplace → restart
marketplace add says "not found"	GitHub propagation delay	Retry in 1–2 min
/plugin does nothing	Old Claude Code	Update Claude Code
Path gives Invalid format error	Path includes quotes	Remove the quotes
Added but nobody in /agents	Did marketplace add but not install	Run /plugin install <team>@sodamagent-marketplace once more
Trained a team agent but it reverted	Edited a team agent directly	Use pick-agent to copy, then train the copy
The doc-search tool errors	No Node.js / blocked internet	Install LTS from nodejs.org
Want to use it on a phone	—	For Claude Code on a computer only

Want to use it on macOS / Linux	—	/plugin commands work the same. Windows-first dev/testing — minor differences may occur. Report via GitHub Issues.
---------------------------------	---	--

8. Safety & cost (must know)

- **Safe to remove.** Install/uninstall is managed by Claude Code.
- **Passwords/keys are not stored in files.**
- This tool is provided **"AS IS" with no warranty.**
- For any external tool (e.g., context7 doc search), **check its pricing/terms yourself.**

9. License (short)

- **Apache License 2.0** — commercial use, modification, copying, and redistribution allowed.
- "Claude Code/Anthropic/Context7" etc. are their companies' names (trademarks); **SoDam-Agent is unofficial and not affiliated.**

10. (Advanced) Instead of the marketplace — run it from your folder

1. Download this project (ZIP from GitHub → unzip).
2. In the Claude Code input box (no quotes, space-free path):

```
/plugin marketplace add C:\downloaded-folder\SoDam-Agent
```

3. Install teams/tool:

```
/plugin install web-app-team@sodamagent-marketplace  
/plugin install sodam-agent@sodamagent-marketplace
```

4. **Restart** to apply.

11. Frequently asked questions (FAQ)

Question	Answer
Is SoDam-Agent free?	SoDam-Agent is free (Apache-2.0). Claude Code subscription and connected tools (e.g., context7) have their own pricing.
Which Claude plan do I need?	Pro or higher is recommended. Free plan behavior is unverified.
Can I use it offline?	Install needs internet. After that, agents work with a Claude API connection. context7 doc-search needs internet.
How do I update?	In /plugin manager, or remove and re-add the marketplace. Keep custom copies with pick-agent before updating.
Is my data sent anywhere?	No. SoDam-Agent has no server. Everything runs on your computer.

Can I make my own team?	Yes. Use the 5 <code>sodam-agent</code> commands. To build a full team, see <code>DEVELOPMENT.md</code> .
What if context7 is missing?	Agents still work — only live library doc lookup is unavailable.
Can I share my agents?	Yes — share the <code>.md</code> file. Check for personal info or API keys first.
