

SoDam-Agent (English)

[한국어](#) | [English](#) · [Beginner Guide \(GUIDE\)](#)

A *beginner-friendly* tool that adds *role-based AI teammate teams* to Claude Code with *a single plugin install* — and lets you *create, train, and manage your own agents even after installing*. No hand-editing config files — *a few commands* inside Claude Code and you're set.

1. What is SoDam-Agent?

Claude Code lets you give tasks to an AI — usually you talk to **one AI**. SoDam-Agent adds **several AI teammates (subagents)** as a "team set" to Claude Code at once. And **even after installing**, you can **create new agents yourself** and **train them**.

- Analogy: it "hires" role-based teammates — **planner · frontend-dev · backend-dev · reviewer** — and lets you hire and train more as needed.
- You **never** create files or edit config by hand.

In one line: *"A tool that installs AI teammate teams into Claude Code, and lets you create and train your own."*

2. Prerequisites & required programs

Item	Required?	Notes
Claude Code	 Required	Install from the official site claude.com/claude-code
Internet	 Required	To fetch the plugin and download some tools (MCP)

Node.js 18+	● Optional (recommended)	context7 MCP doc-search runs via npx. Without Node, teammates still work; only that tool is unavailable. Get LTS from nodejs.org.
------------------------------	-----------------------------	---

3. Download & install

★ Method A — Install from the marketplace (recommended)

A few commands inside Claude Code. No terminal needed.

1. **Open Claude Code.**
2. **Add the marketplace** (one time only):

```
/plugin marketplace add sodam-ai/SoDam-Agent
```

3. **Install the team:**

```
/plugin install web-app-team@sodamagent-marketplace
```

Other teams: docs-team · research-team

4. **(Optional) Install the agent-management tool:**

```
/plugin install sodam-agent@sodamagent-marketplace
```

5. **Restart Claude Code.**
 - ⚠️ **Most common gotcha:** plugins load at startup. **Restart and they show up.**

Method B — Run it from your own folder

1. Download this repository (ZIP from GitHub and unzip).
2. In the Claude Code input box (no quotes, space-free path):

```
/plugin marketplace add C:\downloaded-folder\WSoDam-Agent
```

3. Install teams and tool, then **restart**.

4. Quick start (3 steps)

1. `/plugin marketplace add sodam-ai/SoDam-Agent` (once).
2. `/plugin install web-app-team@sodamagent-marketplace` → **restart**.
3. Open `/agents` — if you see `web-app-team:reviewer`, you're done.

Expected time: **about 2–3 minutes**.

5. What you can install (5 teams, 3 registered + management tool)

Team (install name)	Name	AI teammates (roles)	Bundled tool
web-app-team	Web App Build Team	planner · frontend-dev · backend-dev · reviewer	context7

docs-team	Docs / Content Team	writer · editor · fact-checker	none
research-team	Research Team	researcher · analyst · critic	context7
marketing-team 	Marketing Team	copywriter · seo-analyst · social-manager	none
data-team 	Data Team	data-engineer · data-analyst · data-viz	none

 **Coming soon:** Agent files are complete but `plugin.json` registration still needs manual setup.

Management tool plugin (`sodam-agent`) — create and train your own agents after installing teams.

6. How to use it

Teammates are registered as `team:role` (e.g., `web-app-team:reviewer`).

- **Verify:** type `/agents` → check that `web-app-team:reviewer` etc. appear.
- **How to call:**
 1. Natural language: Ask `web-app-team:reviewer` to review this code
 2. @-mention: type `@` → pick from the list.
 3. Automatic: Claude may delegate based on the task.
- **Tools:** installing `web-app-team` · `research-team` also connects context7 automatically.

7. Manage your own agents (sodam-agent)

Command	What it does
<code>/sodam-agent:new-agent</code>	Create a new agent (asks name·job·personality)
<code>/sodam-agent:training-agent</code>	Train an agent (edits its instructions)
<code>/sodam-agent:save-agent</code>	Save / reuse (global save for all projects)
<code>/sodam-agent:pick-agent</code>	Copy a team agent into your own agents
<code>/sodam-agent:remove-agent</code>	Delete an agent (.bak backup + confirm)

What is "training"? NOT re-training the AI — it edits the agent's **instructions (system prompt)**. Team agents can't be edited directly (overwritten on update) — use `pick-agent` to copy first.

8. Command reference

Command	What it does
<code>/plugin marketplace add sodam-ai/SoDam-Agent</code>	Register marketplace (first time)
<code>/plugin install web-app-team@sodamagent-marketplace</code>	Install web app team
<code>/plugin install sodam-agent@sodamagent-marketplace</code>	Install management tool
<code>/plugin</code>	Plugin manager (list · uninstall · enable/disable)

/agents	View/manage installed teammates
/sodam-agent:new-agent	Create a new agent
/sodam-agent:training-agent	Train an agent
/sodam-agent:save-agent	Save / reuse an agent
/sodam-agent:pick-agent	Copy a team agent into yours
/sodam-agent:remove-agent	Delete an agent (backup + confirm)

9. Workflow at a glance

Add marketplace (once) → Install teams/tool → Restart

→ Verify with /agents (team:role)

→ Call a teammate (natural language / @)

→ (optional) new-agent → training-agent

→ Remove via remove-agent or /plugin when done

10. File & document locations

- **Plugin cache:** ~/.claude/plugins/cache/
- **Your agents:** <project>/.claude/agents/<name>.md (global: ~/.claude/agents/)
- **Repo structure:**
 - .claude-plugin/marketplace.json — catalog (3 registered, 5 total planned)
 - plugins/<team>/.claude-plugin/plugin.json — team metadata
 - plugins/<team>/agents/<role>.md — one AI teammate
 - plugins/<team>/mcp.json — MCP config (web-app · research)
 - plugins/sodam-agent/commands/*.md — 5 management commands
- **Docs:** README.md (KO) · README.en.md (EN) · GUIDE.md (KO) · GUIDE.en.md (EN) · docs/*.pdf

11. Troubleshooting

Symptom	Cause	Fix
Installed but nothing shows in /agents	No restart	Quit and reopen Claude Code. Still missing? /reload-plugins
/sodam-agent shows unrelated stuff	sodam-agent not installed or no restart	Install it → restart
marketplace add says "not found"	Default branch missing marketplace file	Retry shortly
No /plugin command	Old Claude Code	Update Claude Code
Path gives Invalid format	Path includes quotes	Remove quotes — path only

Marketplace added but 0 teammates	Only added, did not install	Run <code>/plugin install <team>@sodamagent-marketplace</code>
macOS · Linux install?	Supported scope	Windows-first. <code>/plugin</code> commands work on macOS/Linux but edge cases possible. Report via GitHub Issues.
Team agent edits reverted	Edited team agent directly	Use <code>pick-agent</code> to copy, then train the copy
context7 errors	No Node.js / network blocked	Install LTS from nodejs.org / try another network
Want to use on mobile	—	Claude Code (desktop/CLI) only

12. Safety & disclaimer

- **Removal is safe:** handled by Claude Code's `/plugin` manager.
- **Secrets never stored in files:** only key names (env-var names) are used.
- This software is **"AS IS" with no warranty.**
- Check **pricing / terms / data policy** of any external tools (MCP) / APIs yourself.

13. License · Copyright · Commercial use

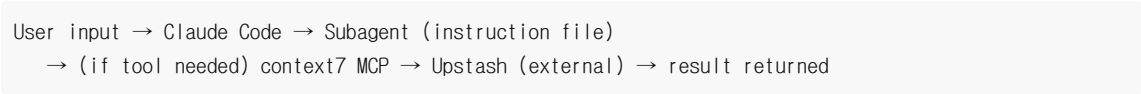

- **Apache License 2.0** — commercial use, modification, copying, and redistribution allowed.
 - Conditions: keep copyright notices, state changes, preserve NOTICE, no trademark grant, no warranty.
- **Copyright:** © 2026 SoDam AI Studio.
- **Trademarks:** "Claude Code", "Anthropic", "Context7", "Upstash" are trademarks of their owners. **SoDam-Agent is unofficial and not affiliated.**
- **Commercial scope:** modification, copying, redistribution, selling, service operation are mostly allowed under Apache-2.0.
- **Your responsibility:** verify pricing, terms, and data policies of MCPs (e.g., context7/Upstash) and external APIs yourself.

14. Security & data flow

Data collection

- **SoDam-Agent has no server.** No user data is collected or transmitted. Everything happens on your computer.

Data flow

API keys & secrets

- API keys are **never stored in files** — only environment variable names.

- Store actual key values in **OS environment variables**.

Self-protection hook

- A Claude Code hook blocks accidental overwrites of `.claude-plugin/` folders.

context7 MCP

- Runs locally via `npx` ; fetches docs from Upstash (external). Verify Upstash pricing/terms yourself.

Backup policy

- Auto `.bak` backup on agent deletion. Capped at 10 backups (oldest auto-removed).

15. Architecture

Repository structure

```
sodam-ai/SoDam-Agent (GitHub)
|
├── .claude-plugin/marketplace.json  ← marketplace catalog
|
├── plugins/
|   ├── web-app-team/
|   |   ├── .claude-plugin/plugin.json ← team metadata
|   |   ├── agents/planner.md · frontend-dev.md · backend-dev.md · reviewer.md
|   |   └── .mcp.json                  ← context7 MCP config
|   ├── docs-team/ · research-team/    (same structure)
|   ├── marketing-team/ · data-team/   ⚙️ (plugin.json coming soon)
|   └── sodam-agent/commands/
|       ├── new-agent.md · training-agent.md · save-agent.md · pick-agent.md · remove-agent.md
|
├── src/  ← Codex CLI only
└── bin/cli.mjs ← Codex CLI entry point
```

Install flow

```
1. /plugin marketplace add → register marketplace.json URL
2. /plugin install <team> → download plugin.json + agents/*.md
3. Restart Claude Code    → load agents → register as "team:role"
4. User calls agent       → run instruction file as subagent
```

Core design principles

- **Serverless**: GitHub + Claude Code only — no dedicated server
- **File-based agents**: `.md` files (LLM-friendly, easy to version-control)
- **Zero external dependencies**: No npm packages required
- **Least privilege**: Each agent has only the tools it needs

16. FAQ (frequently asked questions)

Q. Is this tool free to use?

SoDam-Agent is **free** (Apache-2.0). Claude Code subscription fees follow Anthropic's pricing; connected MCP services (e.g., context7/Upstash) have their own pricing.

Q. Which Claude plan do I need?

Pro or higher is verified. Free plan behavior is unverified.

Q. Can I use it offline?

Install requires internet. After installing, agents work with Claude API. context7 MCP requires online access.

Q. How do I update?

Check in the `/plugin` manager, or remove and re-add the marketplace. Keep custom copies with `pick-agent` before updating.

Q. Can I create my own teams or agents?

Yes. Use the 5 `sodam-agent` commands. For a full custom team, see `DEVELOPMENT.md`.

Q. Is my data sent to a SoDam-Agent server?

No. No separate server. All processing is on your computer.

Q. Is it Windows-only?

Windows-first for dev/testing. macOS/Linux `/plugin` commands work but edge cases possible.

Q. Can I share the agents I create?

Yes — share the `~/.claude/agents/<name>.md` file. Check for personal info or API keys first.

Q. Can I permanently change a team agent's instructions?

Use `pick-agent` to copy it, then modify with `training-agent`.

Q. Is it OK if context7 is missing?

Yes. Agents work normally; only live library doc lookup is unavailable.
